U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No. ____6

Rejection Under 35 U.S.C. 112, Second Paragraph

Claims 4-9 and 13-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 4, 7, 13 and 16 are indefinite for reciting the limitation "steps b through e". Since the independent claim 1 does not recite the step e.

Rejection Under 35 U.S.C. 102(b)

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States. Claims 23-25, 27-28 and 31-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Kumar et al. (5,331,172).

Kumar et al. disclose, in figs. 1-30D, an ionized metal cluster ion beam system. The system includes an ion source 20 for producing a gas cluster ion beam; a beam gate 98 for opening state and/or closing state of the ion beam (see col. 10, lines 37-40); means for rotating the beam gate 98 to control the open state and/or the closed state for the ion beam (see figs. 30A-30D); beam defining means having apertures 90 and 96; an X-Y stage 76 for moving a substrate 10; and a programmable computer (see col. 11, lines 32-53) for controlling the current ion of the ion source 20, the opened/closed ion beam of the beam gate 98 and the moving state of the X-Y stage 76.

Rejection Under 35 U.S.C. 103(a)

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-22, 26, 29-30 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kumar et al. (5,331,172).

Kumar et al. disclose all the features as discussed above except at least one SAW device as recited in claims 1, 3, 12 and 34; a current collection device as recited in claims 26 and 30; and a plurality of gases as recited in claim 29.

Processing at least one SAW device is considered to be obvious variation in design, since a plurality of SAW devices processed for changing properties by applying the cluster ion beam is well known in the art and in the gas cluster ion beam processing system as applicant admitted figs.

1-2 in this application, thus would have been obvious to one skilled in the art to process the plurality of SAW devices in the Kumar et al. gas cluster ion beam system for changing the properties of the SAW devices.

Using the current collection device and the plurality of gases added to the ion source is also considered to be obvious variation in design, since using the current collection device and the plurality of gases added to the ion source to process the substrate is well known in the art and in the gas cluster ion beam processing system, thus would have been obvious to one skilled in the art

to use the current collection device and the plurality of gases added to the ion source in the Kumar et al. gas cluster ion beam system for processing the substrate.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- 1) Tsukazaki et al. disclose a gas cluster ion beam apparatus for forming a thin film on a substrate and a current measurement meter; and
 - 2) Allen et al. disclose a gas cluster ion beam system for processing SAW devices.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner *Kiet T. Nguyen* whose telephone number is (703) 308-4855.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0956. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9318.
